

## PRISM 508 VPAT

### Section 508/Subpart B -Technical Standards/Section 1194.22 Web-based Intranet and Internet Information and Applications

(a) A text equivalent for every non-text element shall be provided (e.g., via "alt", "longdesc", or in element content).

**100% Compliant**

(b) Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.

**Not Applicable** – *No multimedia.*

(c) Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup.

**100% Compliant** – *We do not use color to convey information within the software application.*

(d) Documents shall be organized so they are readable without requiring an associated style sheet.

**100% Compliant** – *All information is in a logical linear format.*

(e) Redundant text links shall be provided for each active region of a server-side image map.

**Not Applicable** – *No server-side image maps*

(f) Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.

**100% Compliant** – *No server-side image maps.*

(g) Row and column headers shall be identified for data tables.

**100% Compliant**

(h) Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.

**100% Compliant**

(i) Frames shall be titled with text that facilitates frame identification and navigation.

**100% Compliant** – *PRISM frames have logical titles (menu, toolbar, main content, etc.) that are used consistently throughout the application. This provides users with the ability to quickly access any portion of a web page.*

## PRISM 508 VPAT

### Section 508/Subpart B - Technical Standards/Section 1194.22 Web-based Intranet and Internet Information and Applications

(j) Pages shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.

#### **100% Compliant**

(k) A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of this part, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes.

**Not Applicable** – *We have achieved full compliance with all provisions making the text-only page unnecessary.*

(l) When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by assistive technology.

#### **100% Compliant**

(m) When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (l).

**100% Compliant** – *The only required download is Adobe Acrobat Reader. PRISM provides a link to the Adobe site. Adobe Acrobat Reader is a web application and conforms to §1194.22 standards.*

(n) When electronic forms are designed to be completed on-line, the form shall allow people using assistive technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.

#### **100% Compliant**

(o) A method shall be provided that permits users to skip repetitive navigation links.

**100% Compliant** – *By dividing navigation into major frames, and consistently using the same frame names throughout the application, users will be able to quickly access any portion of a page. For example, in JAWS, Insert F9 brings up a listing of all frames on the page. The user can simply and quickly select whether they want the toolbar, menu, or main content area of the page. This allows the user to skip any portion of the page desired. In addition, our form pages provide field focus to the first form field on the page.*

(p) When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.

**100% Compliant** – *PRISM does not require timed responses. However, many web servers include a timeout function that automatically disconnects a user after a period of inactivity. A special alert system has been built into PRISM to warn a user when this timeout is about to occur and provides ample opportunity for the user to respond that more time is needed*
